

## Goat IgG anti-Rabbit IgG (H+L)-unconj., MinX Bo,Ck,Go,Gp,Hm,Ho,Hu,Ms,Rt,Sh

### General Information

|                        |            |                               |   |
|------------------------|------------|-------------------------------|---|
| <b>Catalog Number:</b> | SEC-183344 | <b>Physical State:</b>        | Liquid (sterile filtered)                             |
| <b>Quantity:</b>       | 1 mg       | <b>Reconstitution Volume:</b> |   |
|                        |            | <b>Reconstitution Buffer:</b> |   |
|                        |            | <b>Shipping Conditions:</b>   | Wet Ice   |
|                        |            | <b>Product Expiration</b>     | Expiration date is one (1) year from date of opening. |

### Antibody Host / Format

|                         |                    |                                       |                                      |
|-------------------------|--------------------|---------------------------------------|--------------------------------------|
| <b>Host Species:</b>    | Goat               | <b>Clonality / Isotype / Clone:</b>   | polyclonal Ig                        |
| <b>Antibody Format:</b> | IgG whole molecule | <b>Concentration:</b>                 | 1.2 mg/mL by UV absorbance at 280 nm |
|                         |                    | <b>Conjugation:</b>                   | unconjugated                         |
|                         |                    | <b>Maximum Excitation / Emission:</b> | /                                    |

### Specificity

|                              |           |                   |   |
|------------------------------|-----------|-------------------|---|
| <b>Target Species:</b>       | Rabbit    | <b>Immunogen:</b> | Anti-Rabbit IgG (H&L) was produced by repeated immunization with rabbit whole IgG molecule in goat.   |
| <b>Antibody Specificity:</b> | IgG (H+L) |                   | <p>This product was prepared from monospecific antiserum by immunoaffinity chromatography using Rabbit IgG coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Goat Serum, Rabbit IgG and Rabbit Serum. No reaction was observed against Bovine, Chicken, Goat, Guinea Pig, Hamster, Horse, Human, Mouse, Rat and Sheep Serum Proteins. Specificity was confirmed using ELISA against at less than 1% of target signal.</p> <p><b>Minimal Cross Reactivity:</b> Bovine, Chicken, Goat, Guinea Pig, Hamster generally, Horse, Human, Mouse, Rat, Sheep</p> |

### Formulation, Transport and Storage

|                        |  |                             |       |
|------------------------|--|-----------------------------|-------|
| <b>Storage Buffer:</b> | 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2 | <b>Storage Temperature:</b> | 4-8°C |
| <b>Stabilizer:</b>     | None   |                             |       |
| <b>Preservatives:</b>  | 0.01% (w/v) Sodium Azide                                   |                             |       |

This product is for In Vitro experimental use only. Not for Therapeutic or Diagnostic use.

## Application Recommendation

**Application:** ELISA, Immunohistochemistry (IHC), Immunohistochemistry (Paraffin-embedded Sections), Immunohistochemistry (frozen sections), Western Blot

**Dilution:** ELISA 1:15.000 - 1:30.000, Immunohistochemistry (IHC) 1:500 - 1:2,000, Western Blot (WB) 1:500 - 1:2.000

### Application Note:

Anti-Rabbit IgG (H&L) is suitable for use in immunoelectrophoresis, western-blot, competitive western-blot, ELISA and competitive ELISA assays. Specific conditions for reactivity and signal detection should be optimized by the end user.

## Background Information

Anti-Rabbit IgG (H&L) Antibody generated in goat detects reactivity to Rabbit IgG. Secreted as part of the adaptive immune response by plasma B cells, immunoglobulin G constitutes 75% of serum immunoglobulins. Immunoglobulin G binds to viruses, bacteria, as well as fungi and facilitates their destruction or neutralization via agglutination (and thereby immobilizing them), activation of the complement cascade, and opsonization for phagocytosis. The whole IgG molecule possesses both the F(c) region, recognized by high-affinity Fc receptor proteins, as well as the F(ab) region possessing the epitope-recognition site. Both the Heavy and Light chains of the antibody molecule are present. Secondary Antibodies are available in a variety of formats and conjugate types. When choosing a secondary antibody product, consideration must be given to species and immunoglobulin specificity, conjugate type, fragment and chain specificity, level of cross-reactivity, and host-species source and fragment composition.

## Safety Information

This reagent contains sodium azide (a poisonous and hazardous substance) as preservative. Although this concentration is not regarded as dangerous to health, appropriate measures should be taken to avoid skin and eye contact, inhalation, and ingestion. Standard Laboratory Practices should be followed when handling this material.

## Disclaimer

This product is warranted to perform in conformance with product specifications and to be free from defects in material and workmanship. Products are supplied for research use only. The warranty provided herein is valid only when used by properly trained individuals. Unless otherwise stated, this warranty is limited to one year from date of shipment when the product is subjected to normal, proper and intended usage. Buyer's exclusive remedy for non-conforming products during the warranty period is limited to replacement of or refund for the non-conforming product(s). There is no obligation to replace products as the result of accident or disaster or inappropriate use of the products in a manner for which they were not designed, or improper storage and handling of the products.

This product is for In Vitro experimental use only. Not for Therapeutic or Diagnostic use.
