Fite's Stain Kit (For Leprosy and Nocardia)

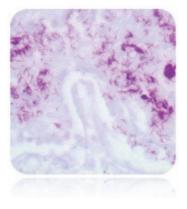

т

Description: The Fite's Stain Kit (For Leprosy and Nocardia) is intended for use in the histological visualization of mycobacterium Lepra bacillus and Nocardia. This kit may be used on formalin-fixed, paraffin-embedded or frozen sections.

Lepra bacillus:	Red
Nocardia:	Red
Background:	Blue

Uses/Limitations:	Not to be taken internally. For In-Vitro Diagnostic use only. Histological applications. Do not use if reagents become cloudy. Do not use past expiration date. Use caution when handling reagents. Non-Sterile.
Control Tissue:	TCS0009-5 (5 Slides)

TCS0009-5 (5 Slides) TCS0009-25 (25 Slides) Any well fixed paraffin embedded Nocardia or Lepra bacillus infected tissue.

Ordering information regarding individual components on back page!

Kit Contents:

Item #	Kit Contents	Volume	Storage
XPO125	Xylene-Peanut Oil Solution	125 ml	18-25 <i>°</i> C
CFZ125	Carbol Fuchsin Solution	125 ml	18-25 <i>°</i> C
AAM500	Acid Alcohol Solution (1%)	500 ml	18-25 <i>°</i> C
MBS125	Methylene Blue Solution	125 ml	18-25 <i>°</i> C

Precautions:

Avoid contact with skin and eyes. Harmful if swallowed. Follow all Federal, State, and local regulations regarding disposal.

Lepra bacillus Procedure (Standard):

- 1. Deparaffinize sections in 2 changes of Xylene-Peanut Oil Solution for 12 minutes each.
- 2. Air dry slide for 15 minutes "without" removing oil film covering tissue section. Remaining film prevents de-staining of Lepra bacillus during differentiation.
- 3. Rinse slide in several changes of distilled water.
- 4. Incubate slide in Carbol Fuchsin Solution for 15 minutes.
- 5. Rinse slide in several changes of distilled water.
- 6. Differentiate section in Acid Alcohol Solution (1%) until background is pink.
- 7. Rinse slide in distilled water and check by microscope for correct differentiation.
- 8. Rinse in running tap water for 1 minute followed by 1 rinse in distilled water.
- 9. Dip slide 2-3 times in Methylene Blue Solution.
- 10. Dip slide quickly in distilled water and check by microscope for correct staining.
- 11. Air dry slide at room temperature.
- 12. Dip slide several times in Xylene or Xylene Substitute.
- 13. Mount in synthetic resin.

Nocardia Procedure:

Preparation of Reagents Prior to Beginning:

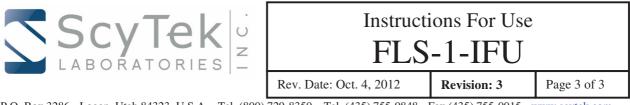

1. Prepare Diluted Acid Alcohol Solution by mixing 25ml of Acid Alcohol Solution (1%) with 25ml of Distilled Water.

Procedure:

- 1. Deparaffinize sections in 2 changes of Xylene-Peanut Oil Solution for 12 minutes each.
- 2. Air dry slide for 15 minutes "without" removing oil film covering tissue section. Remaining film prevents de-staining of Lepra bacillus during differentiation.
- 3. Rinse slide in several changes of distilled water.
- 4. Incubate slide in Carbol Fuchsin Solution for 15 minutes.
- 5. Rinse slide in several changes of distilled water.
- 6. Dip slide 2-3 times in Diluted Acid Alcohol Solution.
- 7. Rinse slide in distilled water and check by microscope for correct differentiation. Avoid decolorizing the Nocardia organism.
- 8. Rinse in running tap water for 1 minute followed by 1 rinse in distilled water.
- 9. Dip slide 2-3 times in Methylene Blue Solution.
- 10. Dip slide quickly in distilled water and check by microscope for correct staining.
- 11. Air dry slide at room temperature.
- 12. Dip slide several times in Xylene or Xylene Substitute.
- 13. Mount in synthetic resin.
